DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

The species of Figure 1;

The species of Figure 2;

The species of Figure 3; and

The species of Figure 4.

Applicants are required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicants will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

The species of Figure 1, which appears to be embodied in claims 13-15, 18, 19, and 21-24.

The species of Figure 2, which appears to be embodied in claims 13, 14, and 16-24.

The species of Figure 3, which appears to be embodied in claims 13-15, 18, 19, 21-23, and 25

The species of Figure 4, which appears to be embodied in claims 13, 14, 16-23, and 25.

The following claim(s) are generic: Claims 13-15, 18, 19, and 21-23.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

The species of Figure 1 recites a piezoelectric viscosity sensor device having a second sensor, comprising a temperature sensor, provided in an edge area of the viscosity sensor device, which is not present in any of the remaining species of the invention.

The species of Figure 2 recites a piezoelectric viscosity sensor device having a second sensor, comprising a temperature sensor, provided in an electrically insulated fashion on the first contact points of the viscosity sensor device, which is not present in any of the remaining species of the invention.

The species of Figure 3 recites a piezoelectric viscosity sensor device having a second sensor, comprising a capacitance sensor, provided in an edge area of the viscosity sensor device, which is not present in any of the remaining species of the invention.

The species of Figure 4 recites a piezoelectric viscosity sensor device having a second sensor, comprising a capacitance sensor, provided in an electrically insulated fashion on the first contact points of the viscosity sensor device, which is not present in any of the remaining species of the invention.

4. Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
